	Primary Examiner, Art U	nit 2613	

Continuation of 11. does NOT place the application in condition for allowance because: The Applicant argues "the Examiner is taking the position that the cited device types (i.e. passive fiber, active optical amplifier and optical cross-connect) are base variables themselves which is simply not true. Consider, for example, the base variables cited in the present application, namely (i) fiber type, (ii) length of segment, (iii) length of fiber span, (iv) number of wavelengths, and (v) power level. By contrast, passive fiber and active optical amplifiers are types of devices. The construction of 'device type' as a base variable is improper, but Levandovsky does not teach anything to that effect." The Examiner disagrees.

First, USPTO personnel are to give claims their broadest reasonable interpretation in light of the supporting disclosure. In re Morris, 127 F.3d 1048, 1054-55, 44 USPQ2d 1023, 1027-28 (Fed. Cir. 1997). Limitations appearing in the specification but not recited in the claim should not be read into the claim. E-Pass Techs., Inc. v. 3Com Corp., 343 F.3d 1364, 1369, 67 USPQ2d 1947, 1950 (Fed. Cir. 2003). Variable is a general term and is not limited to the (i) fiber type, (ii) length of segment, (iii) length of fiber span, (iv) number of wavelengths, and (v) power level.

Second, as admitted by instant specification and Applicant that fiber type, length of segment and length of fiber span are base variables, then passive fiber is a base variable. In fact, Levandovsky further teaches in col. 25, lines 19-22 that the noise introduced in the fiber and amplifier depends on the optical power per wavelength, number of wavelengths simultaneously present, fiber dispersion parameter. That is, Levandovsky does teach the same thing as instant specification to that effect..
